

Introduction

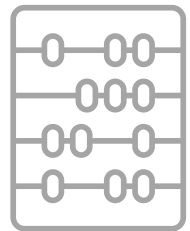

Inspections and Assessments take many forms within organizations. Financial audits, risk management assessments, field readiness, and employee engagement surveys may seem like vastly different functions; however, the underlying process of "assess, inspect, analyze, remediate" is virtually identical.

Today, most organizations rely on a hodgepodge of disconnected systems, SharePoint applications, manual processes, spreadsheets, and emails to manage the myriad inspection processes that exist across each entity. This legacy approach results in missed deadlines, wasted time, high sustainment costs, and unactionable departmental data silos. The srcLogic Inspection Management Framework (IMF) addresses these issues, and more, with a single, unified Pega-based solution to customize each domain-specific assessment or inspection process to meet the organization's needs.

Technical Solution

The srcLogic Inspection Management Framework is a suite of Pega applications and UI Components to enable enterprise scale inspection, audit, and assessment applications. The IMF is built on the industry leading Pega 8 Low-Code Automation Platform and deploys both on-premise and to the Pega Cloud environments. The IMF provides:

- User-defined, flexible organizational hierarchy
- Configurable assessment templates
- Domain specific libraries and question management
- Automated tasking
- Checklist management

Additionally, the IMF includes custom ReactJS UI components built with Pega's Digital Experience API. These UI components provide improved user experience and engaging user interfaces. Our pre-built and reusable Pega components, in the form of rulesets, include the following major components within a single, modern application with an intuitive user interface:

Question Management | Questionnaire or Survey Templates | Survey Assignment and Completion Tracking
Dynamic Tasking | Checklist Management

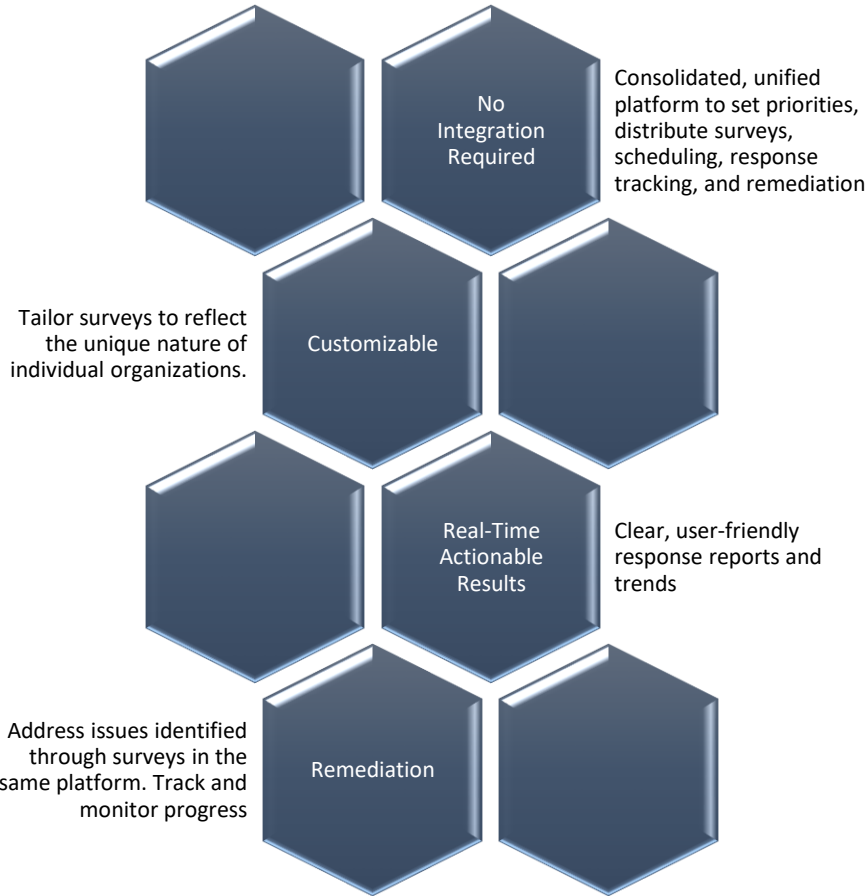

No Integration Required

By consolidating these activities into a single, unified application, organizational leadership can establish priorities, rapidly create and disseminate surveys and assessments, manage deadlines, and monitor data in real time. This instant visibility into an organization’s health and orientation enables decisive action to outpace the competition and other organizational demands.

Remediation Development and Tracking

The srcLogic IMF turns assessment data into actionable information. By consolidating surveys and assessments on a single platform we can immediately remediate findings and deficiencies with corrective actions – in real time.

Survey. Analyze. Remediate. All in one place.
